SUMMARY

"Dual-degree student at IIT Madras (Data Science, 2024 - 2028) and SIMATS (Cybersecurity, 2024-2028), with hands-on experience building production-grade full-stack applications and AI-powered security tools. Won 4+ hackathons including a national-level competition, delivering scalable and impact-driven solutions. Seeking on-site internship opportunities to contribute to real-world engineering or security teams at product and SaaS companies."

EDUCATION

Indian Institute of Technology - Madras (IITM)

BS - Data Science 2024 - 2028

SIMATS Engineering

BE CSE Cyber Security 2024 - 2028

SKILLS

- Software Development
- Data Structures and Algorithms
- Object-Oriented Programming
- Application Development
- Cloud Computing
- Relational Databases
- Big Data Concepts
- Data Warehousing Concepts
- Agile Methodology
- CI/CD
- Application Resiliency
- Software Testing & Debugging
- Problem Solving
- Cross-Functional Collaboration
- Technical Communication

TOOLS

- Python | JavaScript | SQL | React.js | Next.js | Node.js
- Firestore | Git/GitHub | VS Code | REST APIs
- Docker | Linux | Figma | Arduino

CERTIFICATIONS

- IBM Cybersecurity Certification
- Cisco Networking Certification
- Deloitte Practical Cyber Job Simulation
- Mastercard Virtual Cybersecurity
- HP AI for Business Professional
- Let's Upgrade Postman API Student Expert

PROFESSIONAL EXPERIENCE

Cyber Security Intern

VDT Edu Tantr | Feb 2025 - Apr 2025

- Led and collaborated within cross-functional teams to develop innovative software solutions aligned with organizational goals.
- Developed applications using Python and JavaScript, applying strong foundations in software development and system design.
- Utilized modern development toolsets and industry best practices to build scalable and maintainable applications.
- Worked in agile environments, gaining exposure to CI/CD, application resiliency, and cloud-based systems.
- Applied knowledge of software development processes including analysis, maintenance, and continuous improvement to enhance application performance and reliability.

PROJECTS

Elleye Alert (Maritime Safety App)

- Built an offline-capable Android app that enforces India-Sri Lanka IMBL boundaries via real-time GPS tracking, Tamil-first multi-modal alerts, and offline OSM tiles — fully functional with zero network connectivity.
- Addresses a real national safety gap: delivers IMBL protection at near-zero cost on fishermen's existing phones, where government hardware transponder rollouts cost lakhs and remain inaccessible.

Sentinel (LLM-Powered SOC Triage Assistant)

- Built a multi-provider AI triage assistant (Claude, Groq, Gemini) that classifies and prioritizes security alerts in real time, reducing analyst time-to-triage on noisy SOC alert queues.
- Architected a streaming Express/Node.js backend with context-aware alert correlation — enabling analysts to connect related incidents across sessions without manual log cross-referencing.

Deepfake Detection Dashboard (Forensics Tool)

- Built a client-side media forensics engine running real FFT frequency analysis, Error Level Analysis, and Laplacian sharpness scoring — detecting manipulation artifacts that are invisible to the naked eye.
- Every forensic signal computed live from uploaded media with no mock data, producing layered authenticity confidence scores that mirror techniques used in professional digital forensics workflows.

HONORS & AWARDS

- 4+ Hackathon Winner | incl. of National Level
- Google Cloud Lab Completion | Google Arcade Lab
- CM Trophy Winner | Badminton
- Represented at India's South Zonal Tournament | Badminton
